Section 1: MCQ

1. In an array-based stack, which of the following operations can result in a Stack underflow?

Answer

Popping an element from an empty stack

Status: Correct Marks: 1/1

2. Here is an Infix Expression: 4+3*(6*3-12). Convert the expression from Infix to Postfix notation. The maximum number of symbols that will appear on the stack AT ONE TIME during the conversion of this expression?

Answer

Status: Correct Marks: 1/1

3. What is the primary advantage of using an array-based stack with a fixed size?

Answer

Efficient memory usage

Status: Correct Marks: 1/1

4. The user performs the following operations on the stack of size 5 then at the end of the last operation, the total number of elements present in the stack is

```
push(1);
pop();
push(2);
push(3);
pop();
push(4);
pop();
pop();
push(5);

Answer

1

Status: Correct
```

Status: Correct Marks: 1/1

5. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
void push(int* stack, int* top, int item) {
  if (*top == MAX_SIZE - 1) {
    printf("Stack Overflow\n");
    return;
  }
```

```
stack[++(*top)] = item;
int pop(int* stack, int* top) {
      if (*top == -1) {
        printf("Stack Underflow\n");
        return -1;
      }
      return stack[(*top)--];
   int main() {
      int stack[MAX_SIZE];
      int top = -1;
  push(stack, &top, 10);
      push(stack, &top, 20);
      push(stack, &top, 30);
      printf("%d\n", pop(stack, &top));
      printf("%d\n", pop(stack, &top));
      printf("%d\n", pop(stack, &top));
      printf("%d\n", pop(stack, &top));
      return 0:
   }
   Answer
   302010Stack Underflow-1
                                                                       Marks : 1/1
   Status: Correct
   6. Elements are Added on _____ of the Stack.
   Answer
   Top
                                                                       Marks: 1/1
   Status: Correct
```

7. When you push an element onto a linked list-based stack, where does the new element get added?

Answer

At the beginning of the list

Status: Correct Marks: 1/1

8. Consider the linked list implementation of a stack.

Which of the following nodes is considered as Top of the stack?

Answer

First node

Status: Correct Marks: 1/1

9. The result after evaluating the postfix expression 10 5 + 60 6 / * 8 - is

Answer

142

Status: Correct Marks: 1/1

10. Consider a linked list implementation of stack data structure with three operations:

push(value): Pushes an element value onto the stack.pop(): Pops the top element from the stack.top(): Returns the item stored at the top of the stack.

Given the following sequence of operations:

push(10);pop();push(5);top();

What will be the result of the stack after performing these operations?

Answer

The top element in the stack is 5

Status: Correct Marks: 1/1

11. In the linked list implementation of the stack, which of the following operations removes an element from the top?

Answer

Pop

Status: Correct Marks: 1/1

241901118

241901118

12. What will be the output of the following code?

```
#include <stdio.h>
    #define MAX_SIZE 5
    int stack[MAX_SIZE];
   int top = -1;
void display() {
      if (top == -1) {
         printf("Stack is empty\n");
      } else {
         printf("Stack elements: ");
         for (int i = top; i >= 0; i--) {
           printf("%d ", stack[i]);
         printf("\n");
   void push(int value) {
      if (top == MAX_SIZE - 1) {
         printf("Stack Overflow\n");
      } else {
         stack[++top] = value;
      }
    int main() {
      display();
      push(10);
      push(20);
บนรท(30)
display();
     push(30);
```

```
push(40);
push(50);
push(60);
display();
return 0;
}
```

Answer

Stack is emptyStack elements: 30 20 10Stack OverflowStack elements: 50 40 30 20 10

Status: Correct Marks: 1/1

13. Which of the following operations allows you to examine the top element of a stack without removing it?

Answer

Peek

Status: Correct Marks: 1/1

14. Which of the following Applications may use a Stack?

Answer

A Parantheses Balancing Program

Status: Wrong Marks: 0/1

15. What is the advantage of using a linked list over an array for implementing a stack?

Answer

Linked lists can dynamically resize

Status: Correct Marks: 1/1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1: Coding

1. Problem Statement

In a coding competition, you are assigned a task to create a program that simulates a stack using a linked list.

The program should feature a menu-driven interface for pushing an integer to stack, popping, and displaying stack elements, with robust error handling for stack underflow situations. This challenge tests your data structure skills.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the integer value onto the stack. If the choice is 1, the following input is a space-separated integer, representing the element to be pushed onto

the stack.

Choice 2: Pop the integer from the stack.

Choice 3: Display the elements in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

If the choice is 1, push the given integer to the stack and display the following:
"Pushed element: " followed by the value pushed.

If the choice is 2, pop the integer from the stack and display the following: "Popped element: " followed by the value popped.

If the choice is 2, and if the stack is empty without any elements, print "Stack is empty. Cannot pop."

If the choice is 3, print the elements in the stack: "Stack elements (top to bottom): " followed by the space-separated values.

If the choice is 3, and there are no elements in the stack, print "Stack is empty".

If the choice is 4, exit the program and display the following: "Exiting program".

If any other choice is entered, print "Invalid choice".

Refer to the sample input and output for the exact format.

Sample Test Case

```
Input: 13
    14
    3
    2
    3
 Output: Pushed element: 3
    Pushed element: 4
    Stack elements (top to bottom): 43
    Popped element: 4
    Stack elements (top to bottom): 3
    Exiting program
    Answer
    #include <stdio.h>
    #include <stdlib.h>
int data;

Section 1: Coding

1. Problem Statement

Sanjeev is in charge of managing a library's book storage, and he wants to create a program that simplifies this task. His goal is to implement a program that simulates a stack using an array.

Help him in writing a program that provides the following functionality:

Add Book ID to the Stack (Push): You can add a book ID to the top of the book stack. Remove Book ID from the Stack (Pop): You can remove the top book ID from the stack and display its details. If the stack is empty, you cannot remove any more book IDs.Display Books ID in the Stack (Display): You can view the books ID currently on the stack. Exit the Library: You can choose to exit the program.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the book onto the stack. If the choice is 1, the following input is a space-separated integer, representing the ID of the book to be pushed onto the stack.

Choice 2: Pop the book ID from the stack.

Choice 3: Display the book ID in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

- 1. If the choice is 1, push the given book ID to the stack and display the corresponding message.
- 2. If the choice is 2, pop the book ID from the stack and display the corresponding message.
- 3. If the choice is 2, and if the stack is empty without any book ID, print "Stack Underflow"
- 4. If the choice is 3, print the book IDs in the stack.
- 5. If the choice is 3, and there are book IDs in the stack, print "Stack is empty"
- 6. If the choice is 4, exit the program and display the corresponding message.
- 7. If any other choice is entered, print "Invalid choice"

Refer to the sample output for the exact text and format.

Sample Test Case

Output: Book ID 19 is pushed onto the stack

Book ID 28 is pushed onto the stack

```
Book ID 28 is popped from the stack
    Book ID in the stack: 19
Book ID 19 is popped from the stack
    Exiting the program
    Answer

Section 1: Coding

1. Problem Statement

Sharon is developing a programming challenge for a coding competition.

The challenge revolves around implementing a character-based stack data structure using an array.

Sharon's project involves a stack that can perform the following operations:

Push a Character: Users can push a character onto the stack.Pop a Character: Users can pop a character from the stack, removing and displaying the top character.Display Stack: Users can view the current elements in the stack.Exit: Users can exit the stack operations application.

Write a program to help Sharon to implement a program that performs the given operations.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the character to be pushed onto the stack.

Choice 2: Pop the character from the stack.

Choice 3: Display the characters in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

- 1. If the choice is 1, push the given character to the stack and display the pushed character having the prefix "Pushed: ".
- 2. If the choice is 2, undo the character from the stack and display the character that is popped having the prefix "Popped: ".
- 3. If the choice is 2, and if the stack is empty without any characters, print "Stack is empty. Nothing to pop."
- 4. If the choice is 3, print the elements in the stack having the prefix "Stack elements: ".
- 5. If the choice is 3, and there are no characters in the stack, print "Stack is empty."
- 6. If the choice is 4, exit the program.
- 7. If any other choice is entered, print "Invalid choice"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 2

4

Output: Stack is empty. Nothing to pop.

Answer

#include <stdio.h>

Section 1: Coding

1. Problem Statement

You are a software developer tasked with building a module for a scientific calculator application. The primary function of this module is to convert infix mathematical expressions, which are easier for users to read and write, into postfix notation (also known as Reverse Polish Notation). Postfix notation is more straightforward for the application to evaluate because it removes the need for parentheses and operator precedence rules.

The scientific calculator needs to handle various mathematical expressions with different operators and ensure the conversion is correct. Your task is to implement this infix-to-postfix conversion algorithm using a stack-based approach.

Example

Input: a+b

Output:

ab+

Explanation:

The postfix representation of (a+b) is ab+.

Input Format

The input is a string, representing the infix expression.

Output Format

The output displays the postfix representation of the given infix expression.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: a+(b*e)
Output: abe*+
```

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>

struct Stack {
   int top;
   unsigned capacity;
   char* array;
};

struct Stack* createStack(unsigned capacity) {
   struct Stack* stack = (struct Stack*)malloc(sizeof(struct Stack));

if (!stack)
```

```
247901118
                                                      241901118
       return NULL;
      stack->top = -1;
      stack->capacity = capacity;
      stack->array = (char*)malloc(stack->capacity * sizeof(char));
       return stack:
    }
    int isEmpty(struct Stack* stack) {
      return stack->top == -1;
    }
                                                                                 241901118
return stack->array[stack->top];
    char pop(struct Stack* stack) {
      if (!isEmpty(stack))
         return stack->array[stack->top--];
       return '$';
    }
    void push(struct Stack* stack, char op) {
       stack->array[++stack->top] = op;
    // You are using GCC
   int isOperand(char ch) {
      //type your code here
      return(ch>='a' && ch<='z') || (ch>='A' && ch<='Z');
    }
    int Prec(char ch) {
      //type your code here
      switch(ch)
      {
        case'+':
                                                                                 241901118
                                                     241901118

Section 1: Coding

1. Problem Statement

Milton is a diligent clerk at a school who has been assigned the task of managing class schedules. The school has various sections, and Milton needs to keep track of the class schedules for each section using a stack-based system.

He uses a program that allows him to push, pop, and display class schedules for each section. Milton's program uses a stack data structure, and each class schedule is represented as a character. Help him write a program using a linked list.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the class schedule to be pushed onto the stack.

Choice 2: Pop class schedule from the stack

Choice 3: Display the class schedules in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

- If the choice is 1, push the given class schedule to the stack and display the following: "Adding Section: [class schedule]"
- If the choice is 2, pop the class schedule from the stack and display the following: "Removing Section: [class schedule]"
- If the choice is 2, and if the stack is empty without any class schedules, print "Stack is empty. Cannot pop."
- If the choice is 3, print the class schedules in the stack in the following:
- "Enrolled Sections: " followed by the class schedules separated by space.
- If the choice is 3, and there are no class schedules in the stack, print "Stack is empty"
- If the choice is 4, exit the program and display the following: "Exiting the program"
- If any other choice is entered, print "Invalid choice"

Refer to the sample output for the exact format.

Sample Test Case

Input: 1 d 1 h 3

```
Output: Adding Section: d
Adding Section: h
Enrolled 6
    Removing Section: h
    Enrolled Sections: d
    Exiting program
    Answer
    #include <stdio.h>
    #include <stdlib.h>
    struct Node {
   char data;
      struct Node* next;
    struct Node* top = NULL;
    // You are using GCC
    #include<stdio.h>
    #include<ctype.h>
    void push(char value) {
      //Type your code here
      if(!isalpha(value))
        return;
      struct Node* newnode=(struct Node*)malloc(sizeof(struct Node));
      newnode->data=value;
      newnode->next=top;
      top=newnode;
      printf("Adding Section: %c\n",value);
    }
    void pop() {
      //Type your code here
      if(top==NULL)
         printf("Stack is empty.Cannot pop.\n");
         return;
```

```

Section 1: Coding

1. Problem Statement

Latha is taking a computer science course and has recently learned about infix and postfix expressions. She is fascinated by the idea of converting infix expressions into postfix notation. To practice this concept, she wants to implement a program that can perform the conversion for her.

Help Latha by designing a program that takes an infix expression as input and outputs its equivalent postfix notation.

Example

Input:

(3+4)5

Output:

Input Format

The input consists of a string, the infix expression to be converted to postfix notation.

Output Format

The output displays a string, the postfix expression equivalent of the input infix expression.

Refer to the sample output for the formatting specifications.

Sample Test Case

```
Input: A+B*C-D/E
Output: ABC*+DE/-
```

Answer

```
// You are using GCC
    #include <stdio.h>
    #include <ctype.h>
    #include <string.h>
    #define MAX 100
    char stack[MAX];
    int top = -1;
char postfix[MAX];
    int plndex = 0;
    void push(char ch)
    {
      if (top < MAX - 1)
        stack[++top] = ch;
    char pop()
      if (top >= 0)
        return stack[top--];
```

```
return '\0';
char peek()
  return (top \geq= 0) ? stack[top] : '\0';
int isOperator(char ch)
  return ch == '+' || ch == '-' || ch == '*' || ch == '/';
int precedence(char op)
  if (op == '+' || op == '-') return 1;
 if (op == '*' || op == '/') return 2;
  return 0;
void infixToPostfix(char* expr)
  char prev = '\0';
  for (int i = 0; expr[i] != '\0'; i++)
     char ch = expr[i];
    if (isspace(ch)) continue;
    if (isalnum(ch))
       if (prev == ')' || isalnum(prev))
         while (top >= 0 && precedence('*') <= precedence(peek()))
            postfix[pIndex++] = pop();
         push('*');
}
       postfix[pIndex++] = ch;
}
     else if (ch == '(')
       if (prev == ')' || isalnum(prev))
          while (top >= 0 && precedence('*') <= precedence(peek()))
            postfix[pIndex++] = pop();
```

```
push('*');
       push(ch);
    else if (ch == ')')
       while (top >= 0 \&\& peek() != '(')
         postfix[pIndex++] = pop();
}
       if (peek() == '(') pop(); // remove '('
     else if (isOperator(ch))
       while (top >= 0 && precedence(ch) <= precedence(peek()))
         postfix[pIndex++] = pop();
       push(ch);
     prev = ch;
  while (top >= 0)
    postfix[pIndex++] = pop();
  postfix[pIndex] = '\0';
int main()
char expr[MAX];
  scanf("%s", expr);
  infixToPostfix(expr);
  printf("%s\n", postfix);
  return 0;
}
```

Status: Partially correct Marks: 7.5/10

2. Problem Statement

In an educational setting, Professor Smith tasks Computer Science students with designing an algorithm to evaluate postfix expressions efficiently, fostering problem-solving skills and understanding of stack-

The program prompts users to input a postfix expression, evaluates it, and displays the result, aiding students in honing their coding abilities

Input Format

The input consists of the postfix mathematical expression.

The expression will contain real numbers and mathematical operators (+, -, *, /), without any space.

Output Format

The output prints the result of evaluating the given postfix expression.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 82/
Output: 4
Answer
```

```
// You are using GCC
   #include <stdio.h>
   #include <stdlib.h>
#include <ctype.h>
   #define MAX 100
   double stack[MAX];
   int top = -1;
   void push(double num)
     if (top < MAX - 1)
        stack[++top] = num;
   double pop()
     if (top >= 0)
```

```
return stack[top--];
       return 0;
     double evaluatePostfix(const char *expr)
       for (int i = 0; expr[i]; i++)
          char token = expr[i];
          if (isdigit(token))
            push(token - '0'); // Convert char to number
     } else if (token == '+' || token == '-' || token == '-' || token == '-' |
            double val2 = pop();
            double val1 = pop();
            double result = 0;
            switch (token)
     {
               case '+': result = val1 + val2; break;
              case '-': result = val1 - val2; break;
               case '*': result = val1 * val2; break;
              case '/': result = val1 / val2; break;
            push(result);
       return pop();
     int main()
       char expr[MAX];
       scanf("%s", expr);
       double result = evaluatePostfix(expr);
       if (result == (int)result)
pi
Phopoelse
        printf("%d\n", (int)result);
          printf("%.2lf\n", result)
```

return 0;

Status: Correct Marks: 10/10

3. Problem Statement

Rithi is building a simple text editor that allows users to type characters, undo their typing, and view the current text. She has implemented this text editor using an array-based stack data structure.

She has to develop a basic text editor with the following features:

Type a Character (Push): Users can type a character and add it to the text editor. Undo Typing (Pop): Users can undo their typing by removing the last character they entered from the editor. View Current Text (Display): Users can view the current text in the editor, which is the sequence of characters in the buffer. Exit: Users can exit the text editor application.

Write a program that simulates this text editor's undo feature using a character stack and implements the push, pop and display operations accordingly.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the character to be pushed onto the stack.

Choice 2: Pop the character from the stack.

Choice 3: Display the characters in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

- 1. If the choice is 1, print: "Typed character: <character>" where <character> is the character that was pushed to the stack.

 2. If the choice is 2, print: "Under Day."
 - 2. If the choice is 2, print: "Undo: Removed character <character>" where <character> is the character that was removed from the stack.
 - 3. If the choice is 2, and if the stack is empty without any characters, print "Text editor buffer is empty. Nothing to undo."
 - 4. If the choice is 3, print: "Current text: <character1> <character2> ... <characterN>" where <character1>, <character2>, ... are the characters in the stack, starting from the last pushed character.
 - 5. If the choice is 3, and there are no characters in the stack, print "Text editor buffer is empty."
 - 6. If the choice is 4, exit the program.
 - 7. If any other choice is entered, print "Invalid choice"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1 H

1 A

```
Output: Typed character: H
Typed character: A
Current text: A H

Answer

// You are using GCC
#include <stdio.h>
#include <stdib.h>
#define MAX 100
char stack[MAX];
int top = -1;
void push(char ch)
{
   if (top < MAX - 1)
{
     stack[++top] = ch;
     printf("Typed character: %c\n", ch);
```

```
void pop()
       if (top == -1)
          printf("Text editor buffer is empty. Nothing to undo.\n");
     } else
          printf("Undo: Removed character %c\n", stack[top--]);
     void display()
if (top == -1)
          printf("Text editor buffer is empty.\n");
     } else
          printf("Current text: ");
          for (int i = top; i >= 0; i--)
